No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 38, Application US/10355975A

Patent No. 675923

GENERAL INFORMATION:
APPLICANT: Immunex Corporation
APPLICANT: Immunex Corporation
APPLICANT: Martin, Unia
APPLICANT: Martin, Unia
APPLICANT: Anderson, Dirk M.
TITLE OF INVENTION: CALCIUM/CALMODULIN-DEPENDENT KINASE
FILE REFERENCE: 2923-B
CURRENT APPLICATION NUMBER: US/10/355,975A
CURRENT FILING DATE: 2003-01-30
NUMBER OF SEQ ID NOS: 38
SOFTWARE: Patentin version 3.1
SEQ ID NO 38
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 4, Application US/09984890

Patent No. 6492156

GENERAL INFORMATION:

APPLICANT: YAN, Chunhua et al.

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES

TITLE OF INVENTION: THEREOF

TITLE OF LINVENTION: THEREOF

FILE REFERENCE: CL001306

CURRENT APPLICATION NUMBER: US/09/984,890
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3,

Patent No. 6753314

GENERAL INPORMATION:
APPLICANT: Giot, Loic
APPLICANT: Mansfield, Traci A.
TITLE OF INVENTION: Protein-Protein Complexes and Method of Using Same
FILE REPERENCE: 15966-542
CURRENT APPLICATION NUMBER: US/09/538,092
CURRENT PILING DATE: 2006-03-29
PRIOR PRILING DATE: 1999-04-01
PRIOR PILING DATE: 2000-02-01
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The present sequence is Murine Lymph node Stromal cell kinase 1 (MLSK-1). This protein is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, inflammatory diseases, tumours and bacterial, viral or fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases, and for stimulating or suppressing immune responses.

The invention relates to an AMPK (AMP-activated protein kinase) related kinase, designated SNARK polypeptides and polynucleotides. SNARK (SNIF/AMP-activated protein kinase) is involved in stress response to glucose deprivation. The polynucleotides are useful for expressing SNARK protein in isolated form or as a protein conjugate. Activation of SNARK stimulates liver CPT-1 thus enhances lipid metabolism in liver cells and in other cell types such as heart and skeletal muscles, as well as in orbases GLUT-4 and glycogen in muscle. Activation of SNARK is predicted to have insulin-like effects that would enhance the disposal of glucose into muscle and reduce plasma glucose for the treatment of diabetes and come type of disorders of lipoprotein production leading to increased leaves of cholesterol or triglycerides. SNARK or its variants may be administered to a subject to treat or prevent a disease associated with decreased expression of SNARK, such as diabetes. SNARK antibodies are used to modulate SNARK activity either in vivo for therapeutic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HRDLKLENILLDANGNIKIADFGLSNLYHKGKFLQTFCGSPLYASPEIVNGKPYVGPEVD 180

from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121 HRDLKLENILLDANGNIKIADFGLSNLYHKGKFLQTFCGSPLYASPEIVNGKPYVGPEVD 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for Synthesising the full length cDNA are useful length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length not ferm part of the invention. Note: The sequence data for this patent did format directly from EPO

```
The invention relates to an isolated polynuclectide (I) comprising a nuclectide sequence selected from any of 948 sequences (ABZ11119-ABZ1066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynuclectides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABR68902-ABR68949) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cellimaging, atthemet's disease, autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Noce: The sequence data for this patent did not form part of the printed appecification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó

The present invention relates to the isolation of a novel human protein kinase designated 3700, and the polynucleotide sequence encoding it. The invention also describes the use of a modulator of the activity of protein kinase (PK) 3700 for making a medicament or pharmaceutical composition for modulating the ability of a cell to phosphorylate an amino acid residue of a substrate protein Modulators of protein kinase of any cell for modulating protein phosphorylation, cell angiogenesis, tissue repair, tissue repearation, establishment or progression of atherosclerosis, and signalling across the blood-brain progression of atherosclerosis, and signalling across the blood-brain parrier. The polynucleotide and polypeptide molecules for protein kinase 3700 may be used as diagnostic targets and therapeutic agents for prognosticating, diagnosing, preventing, inhibiting, alleviating, or prognosticating, disonedres (e.g. haematopoietic neoplastic disorders, carcinoma, sarcoma, metastatic disorders or leukaemia). The 3700 polynucleotide sequence can be used to express protein kinase 3700, to detect a genetic alteration in a 3700 gene, in chromosome mapping, for tissue typing, in forensic biology, and as surrogate markers. The present

Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic

```
factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the CDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a detecting the expression of a tumour associated gene. The present sequence is the amino acid sequence of a human PRO protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                              ö
                                                                                               This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential theraspeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins in the sesociated with signal transduction, encoding proteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polypeptide sequence is a full length human protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                   SWSLGVLLYILVHGTMPFDGHDHKILVKQISNGAYREPPKPSDACGLIRWLLMVNFTRRA 292

The present invention relates to human Adenosine Monophosphate activated Protein Kinase (AMPK)-related kinase 5 (ARK5/ KIAA0537) and its coding sequence, which are useful for imparting stress resistance to cells. ARK5 is useful for treatment and prevention of tumours, nervous disorders, muscle disorders and ataxia telebanglectasia. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

New 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecules and proteins, useful for treating, e.g. cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes an isolated 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecule (1) comprising any one of 40 nucleotide sequences (1). The nucleic acid molecules and polypeptides are useful for diagnosing and treating a subject having a disorder, or a subject at risk of developing a disorder, which is
multiple sclerosis; Crohn's disease; psoriasis; asthma;
cell proliferation; cell differentiation; cell growth; cell division;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rudolph-Owen LA;
Chun M, Williamson MJ;

                                                                                                                                                                                                                                                                                     The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogran's syndrome, vasculitis, sarchidosis, autoimmune themolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, duillain-Barre syndrome and chronic inflammatory demyelinating polyneuropathy, polyneuropathy. This sequence represents a human PRO polypeptide of the

```
This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (FTK's and STK's), as well as protein kinase-like enzymes. The present invention describes screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antiinflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
New nucleic acid molecule encoding a kinase polypeptide, useful for preparing a composition for treating diseases or disorders, e.g., cancer, or neurological, immunological or inflammatory disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              121 HRDLKLENILLDANGNIKIADFGLSNLYHKGKFLQTFCGSPLYASPEIVNGKPYVGPEVD 180

WPI; 2002-090207/12. N-PSDB; AAD26459 New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as cancer, comprise human kinase polypeptides.

Claim 1; Page 152-153; 197pp; English

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disorders include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, myeloma, sarcoma, texatocarcinoma, Hodgkin's disease); immune disorder (Acquired Immune Deficiency Syndrome (ADS), asthma, Addison's disease, atheroselerosis, anaemia, allergies, adult tespitatory distress syndrome, autoimmune thyroiditis, gout, bronchitis, (Crohn's disease, diabetes mellitus, multiple sclerosis, Good pasture's syndrome, Graves' disease,

```
rheumatoid arthritis, Sjogren's syndrome, uveitis, ulcerative colitis, bacterial, parasitic, fungal, viral, protocoal and helminthic infections) growth and development disorders (arteriosclerosis, cirrhosis, hepatitis, cushing's syndrome, hypothyroidism, cerebral palsy, cataracts), cardio vascular disease (arteriovenous fistula, hypothemsion, vascultis, aneurysms, congestive heart fallure, angina pectoris, myocardicis, ischaemic heart disease, chronic bronchitis, lung tumours); lipid disorder (fatty liver, Rabry's disease, Namann-Pick's disease, hypocholesterolaemia, obesity). PKIN DNA is useful for assessing toxicity of a test compound and in gene therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 IAIHEVPENSSKIVIVMEYASRGDLYDYISERPRLSERDARHFRQIVSALHYCHQNGIV 120

ABZ77126 to ABZ77165 encode the human protein kinases given in ABP96048 to ABP86087. The protein kinases have antiasthmatic, antiniflammatory, antidabetic, antiparkinsonian, antimigrafine, cardiant, cytostatic, immunosuppressive and vulnerary activities, and can be used in gene therapy. A protein kinase therapeutic agent from the present invention, particularly a protein kinase gene agonist or antagonist, can be used for treating a disease or condition associated with a protein kinase in an individual. These diseases include chronic obstructive pulmonary diseases (COPD), asthma, non-insulin dependent diabetes, Parkinson's disease, migraine, myocardial infarction, inflammatory bowel disease, autoimmune disorders (e.g. allograft rejection or graft vs. host disease), cancers (e.g. leukaemias) or wound granulation
                                                                                                                           New protein kinase genes and polypeptides, useful for diagnosing diseases associated with a protein kinase, or in gene therapy for treating e.g. Parkinson's disease, migraine, myocardial infarction, allograft rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 9; Page 87; 258pp; English

```

The present sequence is a novel protein kinase. The novel protein kinases, the and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as INA probes in diagnostic assays. The kinase expression and activity. Diseases related to kinase antibodies and kinase antagonists may also be used to down regulate kinase antibodies of kinase expression and activity. Diseases related to kinase expression and activity. Diseases related to kinase autoimmune disorders, candingopopthies, strokes, renal failure, oxidative-call manner disorders, cardiomyopathies, strokes, renal failure, oxidative-call manner disorders cardiomyopathies, strokes, renal failure, oxidative-call manner and reproductive inflammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, processis, rhinitis, rhinitis, autoimmunity, diabetes, cancers and reproductive

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

serine/threonine-specific protein kinase (EC 2.7.1.-) NPK5 - common tobacco
c;Species Nicotiana tabacum (common tobacco)
C;Date: 28-Apr-1995 #sequence_revision 28-Apr-1995 #text_change 09-Jul-2004
C;Accession: A56009
C;Accession: H: Machida, Y.
Mol. Cell. Biol. 14, 2958-2965, 1994
A;Title: Characterization of tobacco protein kinase NPK5, a homolog of Saccharomyces certase of Saccharomyces cerevisiae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                probable serine/threonine-specific protein kinase (EC 2.7.1.-) kem - mouse C;Species: Mus musculus (house mouse)

Title: US-09-980-464-11_COPY_57_309

Perfect score: 1342

Sequence: 1 YEPLETLGKGTYGKVKKARE......VNPTRRATLEDVASHWWVNW 253

Sequence: 1 YEPLETLGKGTYGKVKKARE.. Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5 Searched: 1825181 segs, 575374646 residues

Total number of hits satisfying chosen parameters: 1825181

Minimum DB seq length: 0 Maximum DB seq length: 200000000 Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                           Suzuki A., Kusakai G.-I., Kishimoto A., Lu J., Ogura T., Lavin M.F.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TISSUE SPECIFICITY: Expressed at high levels in heart and brain, and at lower levels in skeletal muscle, kidney, ovary, placenta, lung and liver.
SIMILARITY: Belongs to the Ser/Thr protein kinase family.
new cDNA clones from brain which can :ro.";
                                                                                                                                                                                                                                                                                                                                                    "Identification of a novel protein kinase mediating Akt survival signaling to the ATM protein.";
J. Biol. Chem. 278:48-53(2003).
-!- FUNCTION: Involved in tolerance to glucose starvation.
Phosphorylates ATM.
-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- ENZYME REGULATION: Activated by PKB/AKT1 during glucose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
-!- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is preliminary data.
